

Regenerative Solution Powered by NAD⁺

NAD⁺ is a powerful anti-aging ingredient that restores skin energy, promotes regeneration, and helps maintain a youthful, healthy complexion.

+ What is NAD?

NAD⁺ (Nicotinamide Adenine Dinucleotide) is a vital coenzyme present in all living cells.

It plays an essential role in cellular energy production (ATP synthesis), DNA repair, and overall cell health. Often referred to as the “fuel” for mitochondria, NAD⁺ helps maintain cellular vitality and resilience.

As we age, natural NAD⁺ levels decline significantly — studies show that by the age of 40, the body may lose nearly half of its original NAD⁺ supply. This reduction contributes to visible signs of aging, decreased energy, and slower skin regeneration.

+ Why ReNAD⁺?

ReNAD⁺ is a premium skin booster that helps restore the skin's natural energy and regenerative power. Its key ingredient, NAD⁺, plays a vital role in cellular metabolism, revitalizing tired skin while improving elasticity and hydration.

Combined with PDRN and hyaluronic acid, ReNAD⁺ works deep within the skin to deliver visible, lasting results.

+ Ingredient Overview

NAD⁺ is a naturally occurring coenzyme found in the body and skin cells. It plays a central role in cellular energy production, DNA repair, and anti-aging processes, making it ideal for skin rejuvenation treatments.

+ Key Benefits for Skin

- Cellular Activation & Skin Renewal: Stimulates skin cells to enhance vitality, firmness, and overall texture
- Deep Dermal Regeneration: Supports the repair and renewal of dermal structures for healthier, revitalized skin
- Anti-Aging & Antioxidant Support: Protects against oxidative stress and slows visible signs of aging
- Hydration & Barrier Strengthening: Improves moisture retention and fortifies the skin's natural barrier

+ Main Ingredients

Each component of ReNAD+ is selected for its proven regenerative, hydrating, and revitalizing properties.

NAD⁺ (Nicotinamide Adenine Dinucleotide)

A coenzyme essential for energy metabolism and cellular repair. It reactivates skin vitality and supports tissue regeneration at the cellular level.

PDRN (Polydeoxyribonucleotide / Sodium DNA)

A DNA-based molecule derived from salmon, known to accelerate tissue healing and cell regeneration. It enhances skin elasticity and promotes repair.

Hyaluronic Acid (HA)

Delivers intensive hydration and volume by drawing moisture deep into the skin, improving suppleness and smoothness.

Niacinamide (Vitamin B3)

A multi-functional ingredient that brightens dull skin, evens skin tone, and reinforces the skin barrier.

Sodium Chloride

Helps maintain osmotic balance, enhances formula stability, and assists in efficient ingredient absorption.
