

Overview

1 OIL LAYER

Helps to minimize irritation, provide protective layer for the skin, moisturizing.

2 ACID LAYER

Acidic Layer, for the “peel” treatment.

Preparation

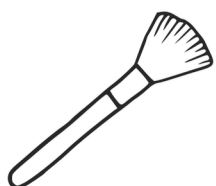

1. SHAKE WELL

Shake well and make sure both oil and water layer is completely mixed together.

2. OPEN CAP

Open cap just enough to expose the gray rubber, and extract the recommended amount by inserting a needle in the middle.

3. APPLICATION

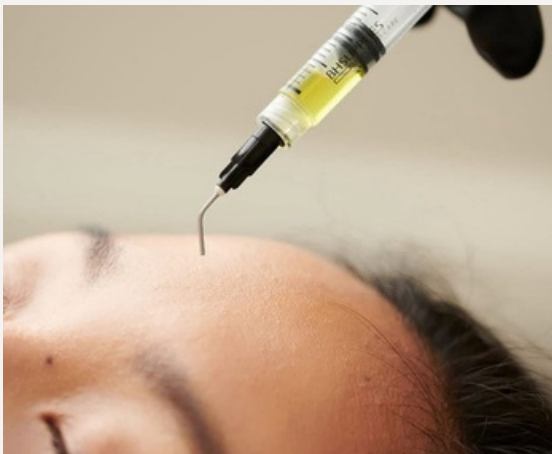

Apply using a brush or gloved hands starting on the T-Zone and move to U-Zone.

Protocol

PREP THE SKIN

It is recommended to prep the skin by double cleansing to make sure all traces of sunscreen and makeup are completely removed. There is no need for a pre exfoliation.

APPLY ACCORDING TO AREA

Apply to T-Zone and U-Zone avoiding eye and lip area.

LEAVE ON SKIN / REMOVAL

Leave on face, neck and décolleté for 7 minutes and wipe it out with a damp sponge or damp facial tissue. There is no need to Neutralize. If using for other parts of the body leave on for 5 minutes for sensitive areas and up to 10 minutes for areas like hands, knees, elbows, legs and feet.
